PROFESSIONAL SUMMARY

Results-driven B.Tech Computer Science candidate specializing in **Machine Learning** and **Artificial Intelligence**. Hands-on experience in developing applications utilizing **Large Language Models**, **computer vision** and **Data Analysis** techniques through projects and training. Engineered a multi-agent architecture that optimized automated workflows, showcasing strong problem-solving, software design abilities and cloud platform uses .

WORK EXPERIENCES

In-House Project-Based Training (Agentic AI, Generative AI, DevOps) | Trainee Jan 2026 - Apr 2026
IBM Datagami (via Mediacaps University) On-site • Indore (M.P)

- Completed 240-hour Agentic AI and DevOps training, building an automated Hospitality Travel Management System.
- Engineered a scalable multi-agent system (CrewAI, LangChain) to optimize automated travel planning workflows.
- Designed robust FastAPI endpoints with a tri-database backend (MongoDB, MySQL) for secure data management.
- Developed multimodal workflows using Llama 3.3 to coordinate agents for personalized travel recommendations.
- Implemented Docker and core DevOps practices to streamline code integration across the multi-agent architecture.

Technologies / Skills Used : Agentic AI, Generative AI, DevOps, CrewAI, LangChain, Llama 3.3, Docker

PROJECTS

Agentic AI Hospitality System | 🐙 Github

- Engineered an autonomous **multi-agent architecture** using **CrewAI**, **LangChain**, and **Llama 3.3** (via **Groq**) to automate complex travel research, showcasing advanced problem-solving and software design abilities.
- Developed a multimodal workflow integrating **LLMs** and image models to create visual resort concepts from text inputs.
- Designed a scalable full-stack platform with **Python** and **React**, implementing an optimized tri-database architecture (including **MongoDB** and **MySQL**) to enhance backend data management and system maintainability.

Technologies / Tools Used : CrewAI, LangChain, Llama 3.3, Python, React, MongoDB

Plant Disease Classifier | 🐙 Github

- Collected and preprocessed leaf images with resizing, normalization, and data augmentation.
- Trained a Convolutional Neural Network (CNN) model for accurate plant disease classification.
- Evaluated model performance using accuracy, precision, recall, and confusion matrix.
- Implemented real-time disease detection functionality ready with help of TensorFlow for web/mobile deployment.

Technologies / Tools Used : TensorFlow, Keras, Python, CNN

SKILLS

Core skills : Agile practices, OOP, Data structure and algorithm, Machine learning, NLP, OS, LLM, Computer vision, Microservices, cloud platform, REST APIs

Programming language : Java, Python, SQL, JavaScript

Frameworks & Libraries : Generative AI, NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow, Keras, LangChain, RAG, LangGraph, OpenCV, React, Tailwind CSS, Node.js, Express, CrewAI

Tools, Platforms & Databases : Git, GitHub, MySQL, Docker, MongoDB

EDUCATIONS

Mediacaps University | Indore (Madhya Pradesh) Aug 2022 - Jun 2026
B.Tech in Computer Science & Engineering CGPA : 8.19

Shri Bal Vinay Mandir | Indore (Madhya Pradesh) Jun 2022
Class 12th (PCM + IP) CGPA : 83.8%

CERTIFICATIONS

- Sigma 4.0 Program** (Full-Stack Development) – **Apna College** Data structures and algorithms full-stack technologies and project-based learning with involvement of Microservices
